

6. I also suggest the following prophylactic regimen for very high risk individuals:

- Hydroxychloroquine 200mg once a day for 5 days, and then 1 pill a week until immunity can be shown or a vaccine becomes available.
- Zinc Sulfate 220mg (or the equivalent of 50mg elemental zinc) once a day for 5 days, and then 1 pill a week until immunity can be shown or a vaccine becomes available.

Dear Mr. President:

I humbly request the following:

1. We need an executive order to override any state obstacles and to (a) allow all physicians to prescribe the above regime without the fear of liability or retribution; and (b) permit pharmacies to dispense this medication without the fear of liability or retribution.
2. The pharmacies need an immediate supply of sufficient medicine to dispense the above regime to at least 15 million people. Please do everything in your power to achieve this.
3. The Task Force should give permission to physicians to treat their patients early and aggressively based on clinical diagnosis, without the delay caused by confirmatory testing. (Of course, if tests results come back negative, then the patient should be advised to stop the medication.)
4. Any bureaucratic/man made obstacles that interfere with doctors' ability to treat their patients with these well known, field tested, inexpensive and life saving medications in my humble opinion is inexcusable and should be treated as a crime against humanity.

With much respect,

Dr. Vladimir (Zev) Zelenko
